In this video we take a look at techniques for migrating applications from the BDE to the DB-Express 4 Framework (DBX4), in particular BlackFishSQL. This video is a bit under 45 minutes long and you can watch it [here](#). Alternatively (as this video is so long) you can also download it from [here](#) (shortly). Also have a look at my links for BDE migration. This video is a replay of my presentation at CodeRage III on December 2, 2008.
