I challenged myself to come up with 100 useful IDE tips and hints, and then explain them all in 45 minutes. Did I succeed? Watch and see. Okay - that was the abstract to my CodeRage III talk. Some of the hints are a bit lame, but others I hope you will find really useful. This video is about 50 minutes long and you can watch it [here](#), alternatively download it and watch it offline (available soon). I have some links also that might help.
